

SCREENING TEST

How serious is the risk of bias?

Is there randomized control trial evidence addressing the impact of the intervention in asymptomatic people?

What are the recommendations, and will they help you in caring for patients?

Were the data identified, selected, and combined in an unbiased fashion?

What are the benefits?

What are the harms?

How do benefits and harms compare in different people and with different screening strategies?

What is the effect of individuals' values and preferences?

What is the effect of uncertainty associated with the evidence?

What is the cost-effectiveness?
